

H Range Low Voltage Metal Oxide Varistor (MOV) Assemblies

A range of Low Voltage, higher energy metal oxide based overvoltage protection devices that have uses in a variety of applications.

The active components are housed within ABS enclosures that are backfilled with a durable epoxy resin. This provides a resilient environmental barrier.

This datasheet covers HL, HL2, HP, HPR and HPRL package types.

Devices are specified by selecting a code prefix from the table below and a configuration suffix from page 2. For example Z500H from the table and PRL configuration from page 2 gives a part code of Z500HPRL.
